Bridging The Gap

Jameco is celebrating 35 years in the electronic components business. Since 1975 we've been sourcing, stocking, and supplying our customers with quality products that has grown to more than 70,000 SKUs today. But, what we think really sets us apart is our ability to design real service into every transaction. The average Jameco employee has worked here for over 9 years and thus brings experience, commitment and integrity to every customer interaction.

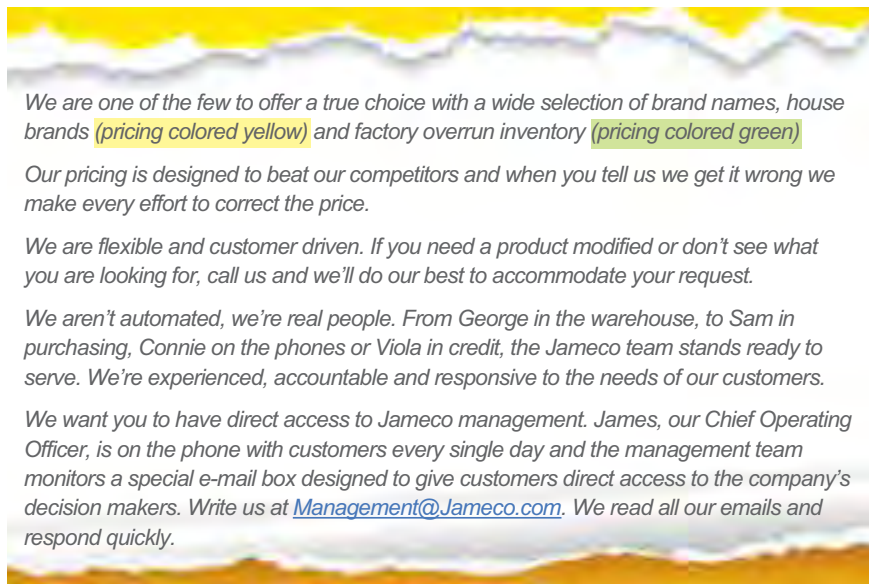

On the Cover: What better way to celebrate our anniversary year than to share the sheer beauty of an engineering wonder in the making on the cover. The Hoover Dam Bypass will replace the current high-wire traverse around Hoover Dam later this year, connecting Nevada to Arizona. While this stunning accomplishment has been a little more than 5 years in the making, we think it symbolizes Jameco's work on bridging the gap with customers — something we've been working on perfecting for more than 35 years. We'll never take your business for granted.

The Hoover Dam Bypass spans 2000 feet long and rises 900 feet above the Black Canyon in Nevada. Its planned opening is in late 2010. Learn more at www.hooverdambyypass.org.

The Difference Is Clear

We focus on new products, competitive prices, and inventory that's ready to ship the same day you order. We think we can be your best electronic component supplier.

We are one of the few to offer a true choice with a wide selection of brand names, house brands (pricing colored yellow) and factory overrun inventory (pricing colored green)

Our pricing is designed to beat our competitors and when you tell us we get it wrong we make every effort to correct the price.

We are flexible and customer driven. If you need a product modified or don't see what you are looking for, call us and we'll do our best to accommodate your request.

We aren't automated, we're real people. From George in the warehouse, to Sam in purchasing, Connie on the phones or Viola in credit, the Jameco team stands ready to serve. We're experienced, accountable and responsive to the needs of our customers.

We want you to have direct access to Jameco management. James, our Chief Operating Officer, is on the phone with customers every single day and the management team monitors a special e-mail box designed to give customers direct access to the company's decision makers. Write us at Management@Jameco.com. We read all our emails and respond quickly.

A Better Catalog...

- **Web Codes** allow you to quickly jump from catalog to website for the latest pricing, availability and more products not included in the catalog.
- The **industry's longest warranty** guarantees everything we sell for 90 days and a full year on Jameco brands.
- We don't put different manufacturers on different pages, we present product in **easy-to-read tables** to make finding and comparing the right product easy.
- Our **Clearance and Tech Closeout Centers** include a wealth of specially priced products. For large quantities go to www.Jameco.com/Clearance or for smaller limited quantities visit www.Jameco.com/TechCenter.

We're Jameco, we look forward to serving you soon and appreciate your business.

MICROCHIP 16-Bit Digital Signal Controllers dsPIC

The dsPIC® Digital Signal Controller (DSC) from Microchip is a powerful 16-bit (data) modified Harvard RISC machine that combines the control advantages of a high-performance 16-bit microcontroller (MCU) with the high computation speed of a fully implemented digital signal processor (DSP) to produce a tightly coupled single-chip single-instruction stream solution for embedded systems design. All integrate Flash program memory and most have EEPROM data storage.

• Memory: flash • Speed: 40MHz

WBU5 Series Key Features:

- Horizontal assembly corresponds to the operation flow design of the PC boards for handy operation
- Round hole design makes the electric connection better
- Formed with V-shaped cross-sectional groove, which allows DIP IC pins to be inserted across two parts and to increase the rate of utilization due to small pitch
- Dovetail protrusions and recesses designed to connect two adjacent parts tightly together

JE Series Key Features:

- Use to breadboard and debug circuit designs
- Low static, plastic body – CMOS safe
- Nickel-plated clips designed to withstand up to 5,000 insertion cycles
- Breadboard strips connect together to form larger working areas
- Components are easily interconnected using 20-28 AWG wire (P/N 19290 & 20080, pg 169)
- Some models feature heavy-duty aluminum backings (20758, 136901, 20812)

Flexinol Muscle Wires®

These unique nickel-titanium alloy Muscle Wires® actually shorten in length when electrically powered, and can lift thousands of times their own weight.

How it works... Pressing the switch lets power flow from the batteries through the Muscle Wire®, heating it and causing it to contract, raise the lever and lift the weight. When power is removed, the Muscle Wire® cools and relaxes, and the weight helps it return to its starting position.

Booster Light for Hard Drive Activity LED

by Forrest M. Mims III

The hard drive activity LED of a desktop computer can be difficult to see when the computer is placed under or adjacent to a desk. Sometimes it's helpful to know that your hard drive is active, and this project will let you know by boosting the dim glow of the HDD activity LED into a much brighter light.
